

Phase 7 – Project Documentation Phase

Date	30-09-2026	Team ID	6ab4dd3aa238dc999eb5dbda
Project Name	Import Data using Transform Maps (Spreadsheet)		

7.1. Business Outcome

The completed workflow demonstrates end-to-end migration of spreadsheet employee data into a structured ServiceNow table using Import Sets and Transform Maps. The Coalesce rule supports data integrity during recurring uploads, while reports provide a readable view of employee information.

7.2. Reports

Report	Visualization	Purpose
Employees by Department	Pie Chart	Shows the distribution of employees across departments.
Employees by Location	Bar Chart	Shows employee counts grouped by location.
Employee List Report	Tabular List	Displays employee attributes such as ID, Name, Department, Location, etc.

7.3. Report Screenshots

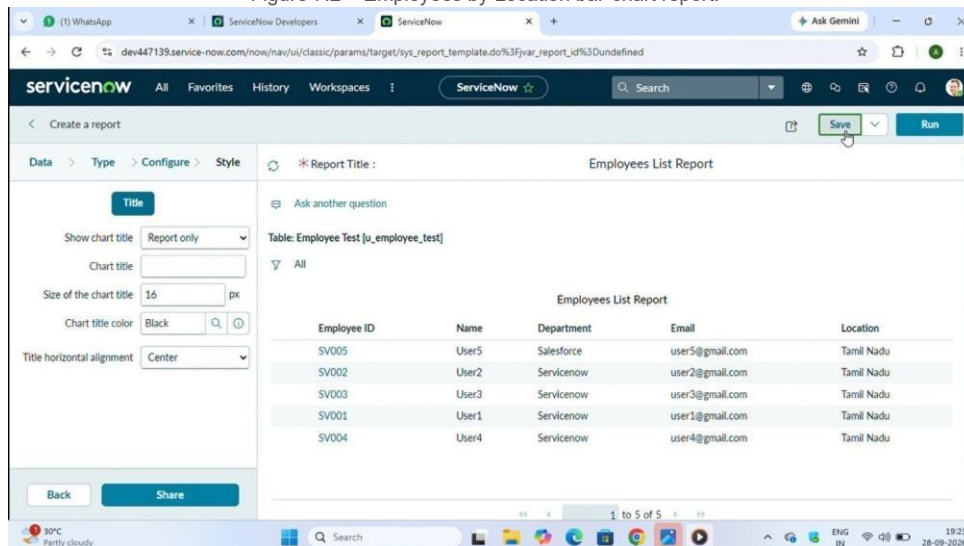

Figure 7.3 – Employee List Report configuration/results.

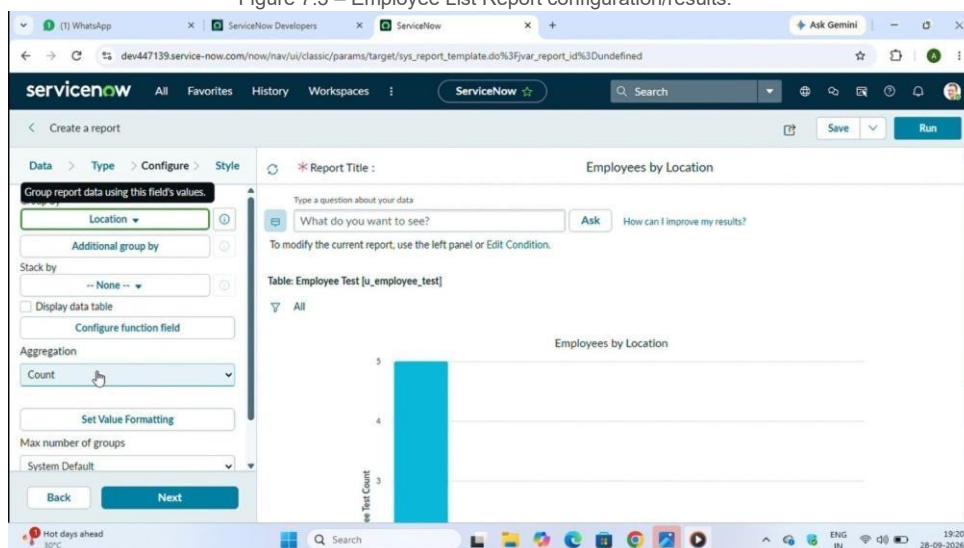

Figure 7.4 – Employees by Location report view.

7.4. Dashboard

The project documentation specifies an Employee Analytics Dashboard (PA_DASHBOARDS.FORM) that consolidates the Department, Location and List reports for operational visibility. The report screenshots below are the evidence available from the supplied project materials.

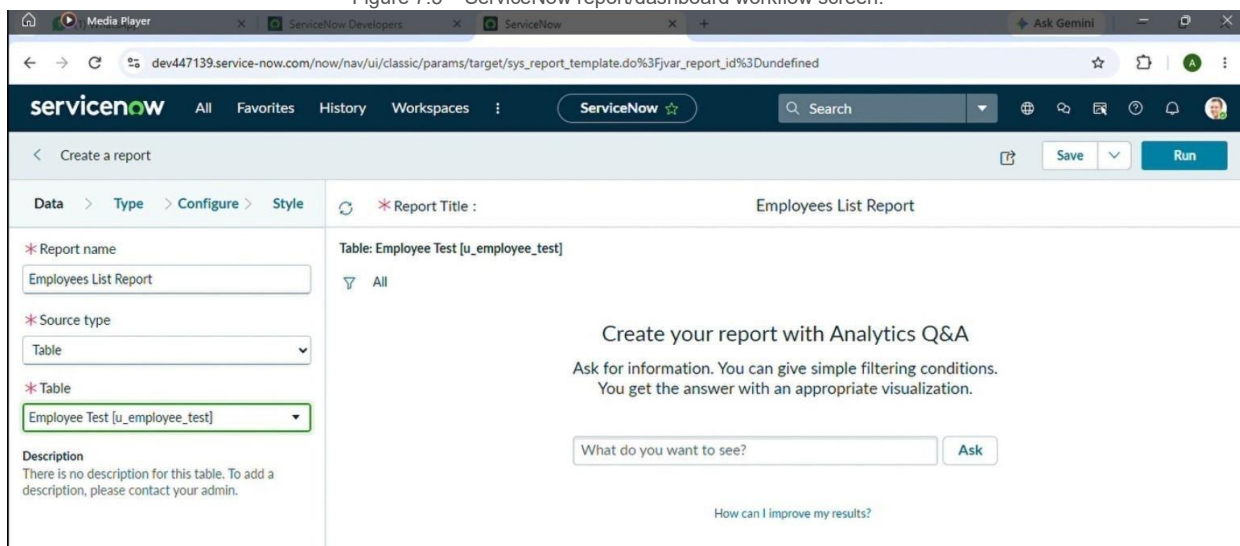

Figure 7.6 – ServiceNow report creation view using the Employee Test table.

7.5. Overall Documentation Summary

- Spreadsheet data is brought into ServiceNow through an Import Set staging layer.
- Transform Map field mappings transfer the source attributes into the Employee Test target table.
- Employee ID Coalesce supports matching existing records during repeated imports.
- Department, Location and List reports provide three complementary views of the imported employee data.
- These reports are intended to be consolidated into the Employee Analytics Dashboard.
